### LAB 01 Readme:

#### # SQE Library Management

A library management project created as part of **Lab 01** for the **Software Quality Engineering (SQE)** course.

#### ## Project Description

The purpose of this project is to establish a GitHub-based software development workflow and demonstrate the basic **Software Quality Engineering** practices introduced in Lab 01.

The project repository includes source code, test cases, documentation, screenshots, and project configuration files organized according to a standard project structure.

#### ## Project Structure

```
```text
sqe-library-management/
├── .github/
│   └── workflows/
├── docs/
├── screenshots/
├── src/
├── tests/
├── .gitignore
├── LICENSE
└── README.md
```
```

## ## Screenshots

Screenshots and evidence of project activities are maintained inside the `screenshots/` directory.

## ## Lab Information

**Course:** Software Quality Engineering

**Lab:** Lab 01 — GitHub Repository and SQE Project

## Overall Project Readme:

When the # Software Quality Engineering

A semester-long repository containing my **Software Quality Engineering (SQE)** laboratory assignments, submission files, and lab projects.

This repository is maintained throughout the semester to keep all SQE laboratory work organized in a single GitHub repository.

---

## ## 📁 Repository Purpose

The purpose of this repository is to:

- Organize all Software Quality Engineering laboratory work.
- Maintain a single repository for the entire semester.
- Keep individual lab tasks organized and easy to navigate.
- Store final lab submission PDFs.
- Store source code, tests, documentation, and other files required for each lab task.
- Track laboratory work throughout the semester.
- Maintain a clean and consistent GitHub workflow.

---

## ## 📁 Repository Structure

```
```text
software-quality-engineering/
├── LABs/
│   ├── LAB#01/

│   ├── LAB#02/
│   │   └── ...
│   ├── LAB#03/
│   │   └── ...
│   └── ...
├── .gitignore
├── LICENSE
└── README.md
```
```

Each laboratory folder contains the files and project(s) related to that specific lab, including the **\*\*submitted assignment PDF\*\*** and any required source code or project files.

---

## ## 🛠 Tools & Technologies

The tools and technologies used in this repository may vary depending on the requirements of each laboratory.

Common tools may include:

- Git
- GitHub
- GitHub Issues
- GitHub Projects
- GitHub Actions
- Software Testing Tools
- Programming Languages and Frameworks required by individual labs

---

## Knowledge Check

### 1. What is Git?

Git is a distributed version control system that helps developers track changes in their source code and manage different versions of a project during software development.

### 2. What is GitHub?

GitHub is a web-based & cloud-based platform that provides hosting for git repositories and provides collaboration features such as issues, pull requests, and project management.

### 3. What is the difference between Git and GitHub?

Git is the version control software that runs on your computer, while GitHub is an online platform used to store Git repositories and collaborate with others.

### 4. Why should .gitignore be used?

.gitignore specifies files and folders that Git should not track, such as temporary files, build files, IDE settings, and sensitive information like passwords or API keys.

### 5. What is an issue in GitHub?

A GitHub issue is a tool for reporting bugs, suggesting improvements, tracking tasks, or discussing problems related to a project.

### 6. Why are labels useful for SQE?

Labels help organize and categorize issues in Software Quality Engineering (SQE), for example by marking them as bug, enhancement, documentation, testing, or high priority, making project management and tracking easier.

# THE END
