Merged PR(s) containing this work, referencing any issues found along the way 4

GitHub repository URL

https://github.com/anasqadri-dev/software-quality-engineering

A tests/ directory with fixtures, mocks, and parametrized tests, all passing

pytest.ini / pyproject.toml test configuration

The pytest.ini file configures pytest test discovery by specifying the test directory and the naming convention for test files. The configuration uses testpaths = tests and python_files = test_*.py. This configuration is intended for the Python-based CI pipeline described in the lab instructions and does not configure the Java/JUnit test runner.

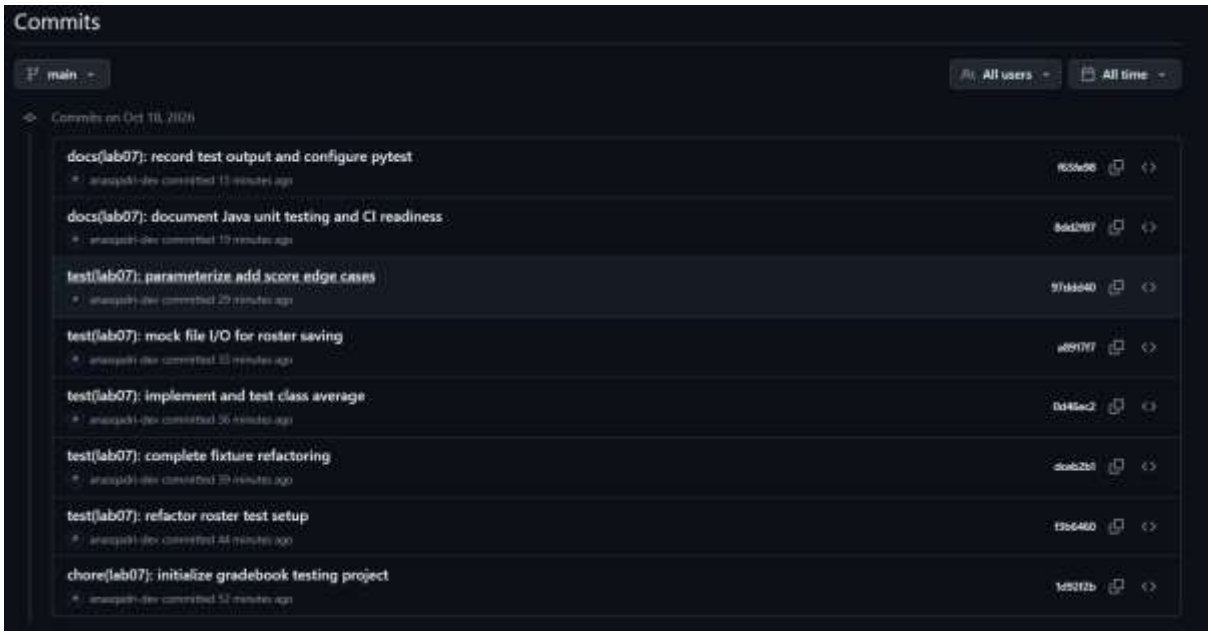

```
[pytest]
testpaths = tests
python_files = test_*.py
```

docs/unit-testing-notes.md comparing verbose vs. short output and documenting fixture scopes

The unit-testing-notes.md file documents the difference between verbose test output and short traceback output, including when each is useful. It also describes the Java test setup and the distinction between Java fixture lifecycle annotations, such as @BeforeEach and @BeforeAll, and pytest fixture scopes. The recorded pytest commands collected zero Python tests because the repository's gradebook tests use Java/JUnit.
